

Updated Personal Transportation Device Policy

Effective 4/19/2021

Bicycles are allowed on Mountain Line buses provided they fit in the rack. All fixed route Mountain Line buses have bike racks that hold up to three (3) bicycles each. The racks are made for standard size, unaltered bikes. Oversized bikes or those with added accessories can make it impossible for them to be safely secured on the bike rack.

If the bike rack is full, a bike may be allowed onboard the bus providing there is room, and the bike is secured and not obstructing the walkway. The bus operator will determine if a bike will be allowed in the bus on a case-by-case basis. Any bike transported inside the bus must be deboarded if requested.

Push scooters and skateboards are allowed inside the bus provided they don't obstruct the walkway or interfere with other passengers. Roller skates/blades cannot be worn on buses.

Battery-powered bicycles and scooters are allowed on Mountain Line buses:

- Riders may place electric bicycles with sealed gel, lithium ion, or NiCad batteries in the bike rack if they fit safely in the bike rack, have standard tires, and meet the requirements above.
- Customers may carry on an electric scooter, skateboard, hoverboard, or unicycle with sealed gel, lithium ion, or NiCad batteries if they can be folded and fit under your seat or on your lap.

The following devices will not be allowed on or in any Mountain Line vehicle:

- Bikes that cannot be properly secured because of size or non-removable accessories.
- Bikes that interfere with the bus operator's field of vision.
- Any bike, scooter, hoverboard, or skateboard powered by gasoline engine or containing a liquid acid battery.
- Bicycle trailer.
- Segway-type devices (except those used as an ADA mobility device).
